

Look to i3 Statprobe for an innovative approach to clinical data management that's shaped by superior industry experience. This depth of experience enables us to precisely pair technology and proven processes with client studies—from small Phase I trials to large Phase III–IV multinational studies—and help streamline the route to more efficient and effective solutions.

i3 Statprobe's comprehensive data management expertise spans eCRF/CRF design, database design and validation programming, data capture and validation, focused data review and reconciliation, data analysis and integration, and database lock and freeze.

i3 offers the flexibility, efficiency, and accuracy to meet your clinical trial goals.

Experienced data management staff

The i3 Statprobe global data management team's broad exposure to diverse industry issues over many years, combined with its proven flexibility in areas from small-scale individual projects to large-scale strategic partnerships, enables it to meet the unique needs of each client and study.

Consider that:

- The average level of industry experience in the i3 Statprobe data management team is 10 years
- Our 31 data management staff with formal CCDM certification account for nearly 8% of the industry total
- Over the last 2 years, our data management team has recorded an average database quality level of 99.98%
- As a proven leader in multi-year strategic alliances, we are a CDM partner to some of the world's largest pharmaceutical companies

We're also renowned for our ability to:

- Understand and adapt new processes to optimize effectiveness
- Consult with you about how to apply electronic data capture (EDC) and other technologies to maximum advantage
- Anticipate and proactively address issues
- Make data available to you on a daily basis using our proprietary web portal KnowledgePort™
- Take a flexible, pragmatic approach to data management
- Form a strategic alliance to perform functional services like data management and clinical research as your trusted partner
- Seamlessly support every aspect of a project

EDC and integrated technologies

Since its early days in the industry, i3 has worked with clients to maximize the benefits of electronic data capture (EDC) technology. We've created an approach to EDC that improves its effectiveness—whether we're using our in-house EDC tools, i3Cube™ and Oracle® Remote Data Capture (RDC) Onsite 4.5.3, or any third-party system. To date we have conducted nearly 200 EDC studies at more than 400 clinical sites in over 40 countries. Month after month, our clients report extremely high satisfaction scores.

i3Cube

See and manage your clinical trials like never before.

Learn more about **i3Cube™**, our revolutionary new trial and data management system that automates the entire clinical process from beginning to end for shorter timelines, greater team collaboration, and superior cost control, at www.i3cube.com.

By acquiring clean data at the point of creation, EDC can increase the speed and quality of your data stream. By integrating leading EDC technologies and streamlining our processes, i3 can help you achieve the flexibility, efficiency, and accuracy needed to meet your clinical trial goals.

Find out how i3's expert clinical data management solutions can support your product.
