

Jeanne E. Loughlin, Project Director, has been with the epidemiology group since it was formed in 1980 and most recently served as Director of Epidemiology. She earned her Master of Science in Epidemiology from Harvard School of Public Health in 1979. Prior to joining the epidemiology group she conducted research on the risk of testicular cancer associated with prenatal exposure to diethylstilbestrol. Early work with the epidemiology group included occupational and environmental studies of non-ionizing radiation, asbestos, petroleum-based chemicals, and cellular telephones. Ms. Loughlin has extensive experience in the design, management, and reporting of large scale postmarketing safety research for the pharmaceutical industry using a variety of health insurance claims databases. She has written or co-authored over 25 peer-reviewed articles. Her most recent work at i3 Drug Safety has been in the areas of female health, cardiovascular disease, antivirals, pain management, and vaccines. In her current role as Project Director she has oversight responsibility for the performance and quality of all epidemiology projects and leads the Project Management group.
